EDUCATION

University of Toronto

Toronto, ON, Canada

Bachelor of Science – **Computer Science Specialist, Statistics Major**

Expected Jun 2028

GPA: 3.74/4.00 — Coursework: Systems Programming, Data Structures & Analysis, Human-Computer Interaction, Theory of Computation

EXPERIENCE

Software Developer Co-op

May 2026 – Present

Trend Micro

Ottawa, ON, Canada

- Developed the **AI Skill Scanner** for DDCloud Sandbox Analysis, integrating **static and dynamic analysis**, sandbox system events, and prompt session traces into structured scan reports to detect malware and supply-chain threats in AI agent skill packages
- Built **FEDex MockUP**, a tool that converts production React code into interactive UI prototypes by intercepting APIs and injecting pre-recorded threat-analysis data, eliminating backend dependencies during prototyping
- Reduced design alignment cycles by **~20%** by replacing static sketches with shareable live prototypes automatically deployed to **AWS S3** through a CI/CD pipeline

AI Application Development Engineer Intern (Full-Stack)

Jun 2025 – Nov 2025

Tiangong Zhiyuan Technology Co., Ltd.

Shenzhen, Guangdong, China

- Built a Python-based **AI agent workflow system** to automate work-order operations, enabling structured task orchestration and reducing manual coordination time by **~15%**
- Designed a modular API-driven backend integrating workflow processing and system monitoring nodes for real-time operational tracking
- Developed configurable HTML + JSON interfaces with **SQL-backed** state management and used **AI-assisted development (Cursor)** to accelerate development cycles by **~60%**

Technical Intern — Robotics Department

May 2025 – Jun 2025

Beijing Haibaichuan Technology Co., Ltd.

Beijing, China

- Developed PC-integrated control software for humanoid robots, combining **servo motor control** with motion sequencing and expression rendering to support synchronized behaviors and real-time interaction

PROJECTS

Co-Founder & Founding Engineer — Togedex 🎮 App Store

Feb 2026 – Present

- Co-founded and developed a **React Native (Expo)** mobile app for Pokémon TCG collectors to manage collections, trade with nearby players, and verify card authenticity via camera
- Engineered a computer vision card scanning pipeline using **OpenCV** for card detection and extraction; fine-tuned an **ONNX-based RapidOCR** model for card name and ID recognition with fuzzy matching across thousands of card variants
- Deployed the recognition service using **Python (Flask)** on **Fly.io** and built core app features including portfolio management, and real-time synchronization with **Supabase (PostgreSQL + Edge Functions)**

iGather – Human-Centered Planning Platform(UX & UI Design) Report

Jan 2026 – Mar 2026

- Conducted user experience research on small-group planning through interviews, affinity mapping, persona development, and competitive analysis to identify coordination challenges and design opportunities
- Designed and evaluated low-fidelity and interactive **Figma** prototypes through iterative user testing, synthesizing qualitative findings into user-centered interaction flows and interface improvements

SKILLS

Languages: Python, Java, C, TypeScript, SQL, HTML/CSS, R

Frameworks & Libraries: React, React Native, Node.js, Flask, Django, OpenCV, RapidOCR, PyTest

Cloud & Databases: AWS (S3), Supabase, PostgreSQL, Fly.io

Developer Tools: Git, GitHub, VS Code, Cursor, Claude, Jupyter

Technologies: REST APIs, JSON, ONNX, MCP, CI/CD
